$$84 \times 0.507\% = .42$$

$$86 \times 0.919\% = 8.514$$

$$87 \times 0.70\% = 6.09$$

$$88 \times 82.6\% = \underline{\underline{72.688}}$$

Mass #'s are always whole #'s

Average atomic mass is a weighted average of the mass #'s.

1. Both have the same number of protons (92). They are different because uranium-235 has 143 neutrons and uranium-238 has 146 neutrons.
2. An isotope is an atom that has the same number of protons but a different number of neutrons in its nucleus.
